Home Work 5b

1. **Hashing Strings**

   (a) How the strings are hashed? What are the ways to form unique integers/numbers from the strings?

   (b) Repeat HomeWork5a for string data.

   (c) What hashing algorithms are used in the built-in hashing libraries for strings in different languages i.e. Java, C-Sharp and C++?

   (d) Implement BBST and compare the actual search time with hash tables both for homework5a and homework5b.
